PROFILE

Self-taught software engineer with ten years of experience whose **main skill is software architecture**. Founder and lead engineer of antiloki, a vibe-coding IDE that merges models from different providers to reach frontier-model quality at up to 6x lower cost, with deterministic code review and every AI tool call audited. Before that, front-end and full stack engineering at banks and regulated-data companies, with teams in Brazil, Portugal, France, the Caribbean and New York. Works remotely in English.

PORTFOLIO · ANTIAPPS

danilosilvadev.github.io/antiapps

antiloki
Vibe-coding IDE that merges models: frontier quality at up to 6x lower cost.
antiloki.com

antiPost
Post, answer comments and DMs and capture leads from one place; nothing goes out until you approve.
danilosilvadev.github.io/antiapps/antipost

antiQA
End-to-end tester: plays your user stories in a real browser, keeps video evidence, writes the bug report.
danilosilvadev.github.io/antiapps/antiqa

antiHunt
Local leads app: ask about a lead pack in plain language; drafts outreach, never sends it.
danilosilvadev.github.io/antiapps/antihunt

antiBot
Multi-agent desktop assistant on your own machine: no server, no API key.
danilosilvadev.github.io/antiapps/antibot

antiDrive
Portable encrypted drive that runs from a pendrive on Windows and Linux; no cloud holds your files.
danilosilvadev.github.io/antiapps/antidrive

EXPERIENCE

2026 — now
Remote · Brazil

Founder and lead engineer · antiloki

A vibe-coding IDE for developers

- Merges models from different providers to reach frontier-model quality at up to 6x lower cost; a deterministic harness controls quality and token usage; deterministic code review checks every change; every AI tool call is audited.
- Architected and built alone: desktop app (Tauri, React, TypeScript), Rust engine of about 360,000 lines (axum, SQLite), benchmark-driven router, agentic orchestration, signed Windows and Linux installers with auto-update.
- 11 signed releases and more than 10,000 automated tests. Local-first, offline-capable, no telemetry.

SKILLS Software architecture · Rust · Tauri · React · TypeScript · Model merging · Harness engineering · Agentic orchestration · Code review · Audit logging

2022 — Apr 2026
Portugal · teams in New York and Portugal

Full stack engineer · Arrow Global

- Led a team of 3 developers.
- Refactored a legacy React and TypeScript code base to SOLID principles, with custom hooks and context: components went from hundreds of lines to under 60.
- Built a self-generating multi-step investment form (useReducer, Context) that replaced Excel tables for fund investments.
- Worked on the back end with NestJS; set up a MirageJS mock API, commit linting and an in-house CSS framework.

SKILLS Software architecture · Team leadership · React · TypeScript · NestJS · SOLID · Custom hooks · MirageJS

2021 – 2022
Caribbean

Senior frontend developer · CIBC FirstCaribbean International Bank

- Started a credit-card selection application from scratch and led its technology and architecture decisions.
- Custom hooks cut component size by up to 40%.

SKILLS Software architecture · React · Redux Toolkit · TypeScript · Cypress

2019 – 2021
Full-time · French team

Senior frontend developer · K2 Partnering Solutions, for Wiley / CrossKnowledge

- Scrum and Jira owner for the team; demoed every sprint to clients in English.
- Proved a functional-programming rewrite with a concept branch (200 lines became 30): code size fell about 35% on a product earning over €5 million a year.
- Built a Vue learning platform and helped reach 80% test coverage.

SKILLS Software architecture · Scrum · Jira · Functional programming · Vue · Automated testing

2019

Senior frontend developer · Dogma Data Privacy

- Built alone, from scratch, a GDPR permissions and cookie dashboard (the screen where privacy consents and cookie choices are managed), at 89% test coverage.

SKILLS Jest · Cypress · Storybook · GDPR

2016 – 2019
Three separate roles

Frontend developer · BlueFoot · Trackmob · FaçoDesign

- Built an e-commerce component library and data-cleaning middleware at 80%+ test coverage, leading a small team.
- Built a donations dashboard for a non-profit, with internationalisation.

SKILLS Frontend · Component libraries · Test coverage 80%+ · Team leadership · Internationalisation

SKILLS

ARCHITECTURE	**Software architecture (main skill) · system design · SOLID · deterministic design · local-first and offline apps**
AI	Local AI training · LoRA fine-tuning · AI training · agentic orchestration · neural graphs · model routing and merging · harness engineering · AI evaluation and calibration · prompt transparency · AI audit · deterministic code review
BACK END · SYSTEMS	Rust (axum, SQLite) · NestJS · Tauri · Postgres · Supabase
FRONT END	React · TypeScript · Redux Toolkit · Vue · Storybook
QUALITY · DELIVERY	Jest · Cypress · test-first · signed installers and auto-update · release engineering
LEADERSHIP	Led a team of 3 developers · Scrum and Jira owner

PRINCIPLES

- Measure before claiming; withdraw what a re-run fails.
- Deterministic first: rules answer, models judge meaning.
- Local AI, offline apps, no telemetry.
- Audited AI, prompt transparency, written rules for agents.

SELF-TAUGHT · LANGUAGES

- Self-taught: learned by building and shipping, from front end to Rust and local AI training
- Portuguese (native) · English (professional)
